Once you settle for mounting a wall that controls the required boxes, the final product is a stylish view of the TV on the wall. 3/10 A luxurious shift, spa-like bathroom, the host has putting a lot of effort into making the bathroom a place to relax and unwind. TV setup in a bathroom provides the perfect place to catch the news while you're ready or relax with a movie and bubble bath at the end of a long day. Given the nature of the bathroom, however, you will want to make sure that the TV cables are hidden on the wall to protect them from the water. Here's how to fish cables from a wall. Photo: Smart Tech by Liberty 4/10 One of the coolest ways to hide the unit when a tv is not in use courtesy of a coffee table hidden. You can either build your own unit or refinish an existing piece of furniture, such as a blanket trunk or cedar chest. This version has been custom made in canada.photo: Consider doing a showpiece by framing, if pinterest/Christopher Saunders is the only thing you want to install simple TV on the wall with permission of 5/10. This idea capitalized on the popular pipe furniture craze and is a rustic and comfortable way to make a statement. Photo: Pinterest/Jeff Bolser built their DIY outdoor living room with permission from 9/10 and this will be the perfect spot to integrate a TV to use on hot summer nights. Outdoor TV installation makes perfect sense if you have a great meeting of people to watch a special event as there is usually more room to spread. Inside an outdoor kitchen is one of our favorite outdoor TV montage ideas. Photo: Released courtesy of Digital Life: 07 May 2019 New TVs belong to the wall. Beyond a more stylish design, mounted TVs save space and allow you to hide ugly wires. Fortunately, drywall is an easy project to assemble a TV that all homeowners can learn. Before you begin, you'll need a few ingredients: TVWall installation and There are several TV slots on the market that cover screws or boltsDrillLevelTape measureStud finderPencilWashersTV cable kit or racewayOutlet. Whether you buy from Amazon, the store or elsewhere, your options are endless. Beyond reading the assembly description, the most important detail is how big a TV can hold. If the TV mount only holds a 55-inch TV, don't test it on the 65-inch TV! A heavy TV can break a smaller passenger and ruin the wall and equipment. You must also decide whether you want a rotary assembly or flat assembly. Rotating mounts give you a perfect look at the TV, no matter where you are in the room. They don't cost a little more, but the added convenience is worth it. Then, you have to decide where to mount the TV. Before you do that, think about the wires. If cords are not a problem, your TV should be at eye level while you sit. Although most TVs are mounted slightly higher, this angle can damage your height. If you want to hide the wires or mount the TV on a fireplace or fireplace, the installation becomes a bit difficult. Most professionals are used to it, but labor is more demanding. In fact, the professional cost to install a flat-screen TV on a fireplace or fireplace is \$280. Drywall can hold small TVs, 19 or less. Most TVs are much bigger these days, so be sure to install wall mounting into nails. Although the nails are not marked, you can use a stud finder to find them. If you don't have a stud finder, consider the following tips: Studs are usually 16 from each other. If you know where a 100th is, mark it with a pencil and measure it horizontally at 16 inches to find others in both directions. Hit the wall. If it sounds solid, you found a 10-year-old. If it sounds hollow, or you can't tell, consider buying a good ness finder. Hold your mount to the wall wherever you want. Mark mounting holes with a pen. Mark one hole per 1m (two in total). Get in the bin and drill some pilot holes in the wall. Get mounted and screw into the wall with the screws that come with it. Don't shake it to the end. Leave enough so he can hang on the wall without human support. Place your level in the assembly. If it is not the level, you have to adjust the assembly. If you have it, install the required bolts and washes (both ensure the TV holds). Installation Now make sure it is firmly attached to the wall. If you want to hide your cables, continue with this step. If not, go to the next step. First, make sure a power supply is nearby. If not, an electrician will have to add an outlet. They need to install it right below or on the assembly. Electricians charge about \$193 to install an outlet. If the output is away, you still have to drill a hole right under or above the assembly. Next, drill another hole near the exit. Then use your TV cablekit to spread the power cord and HDMI cable across the wall and plug it into its nearest outlet. Snaking these cables not, but it should be done if you want to hide ugly cables. On the other hand, if you have a you can skip this step completely. There should be parts that add to the mounted TV. Follow the assembly manual and connect such parts. Make sure these metal bars hold firmly while holding your TV. With the help of a friend, gently place the TV on the wall. If necessary, tighten the two screws under the TV. Some mounts do not require additional screws. Before releasing, make sure it is fixed and flat. Sit on your sofa to test the angle and power supply.
